

FILM-A-RECORD

TRADEMARK

444

An innovation in high-performance compact cameras ...

FILM-A-RECORD **444**

**AN ADVANCED NEW CONCEPT
IN HIGH-PERFORMANCE,
LOW-COST,
COMPACT CAMERAS**

A remarkable new high-speed camera that introduces new standards of economy, along with high-performance and ease in automatic operation.

The Four-Four-Four is amazingly compact, light enough to carry, and error-proof in operation. Ingenious designed-in features make the Film-A-Record 444 *completely automatic*.

Completely automatic includes *Exposure Control*! Only Remington offers the welcome combination of a low-cost, flow-type, compact camera that has transistorized Automatic Exposure Control built right into the unit. The Four-Four-Four is a precision unit that will photograph dark records, light records, mixed records—all with the proper exposure—*automatically*!

Now, a single Four-Four-Four unit can do all the microphotography necessary at all locations since it is a pick-up-and-move lightweight camera. Operation is simple with no special training required.

Film-A-Record Four-Four-Four—a truly modern camera.

FEATURES

AUTOMATIC EXPOSURE CONTROL—Automatically maintains the proper exposure settings over a wide variety of document colors and textures, even with line voltage variations.

WARNING BUZZER—Indicates when supply spool has less than 4' remaining.

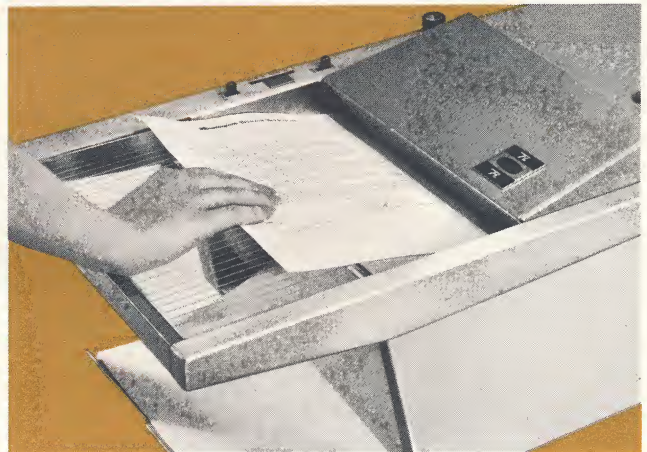

FOOTAGE INDICATOR—Indicates film used.

ILLUMINATION—Type 1004 GE Lamps in series.

FILM—16mm 100' supply, daylight loading.

SPEED—1000 in. per min.

LENS—6 element 20mm special

REDUCTION RATIO—24 to 1

MAXIMUM COPY SIZE—11¼" wide by any length.

THE 444 BELONGS...

in *Financial Institutions*, for filming signature cards, checks, tax returns, wills, statements, and other vital documents;

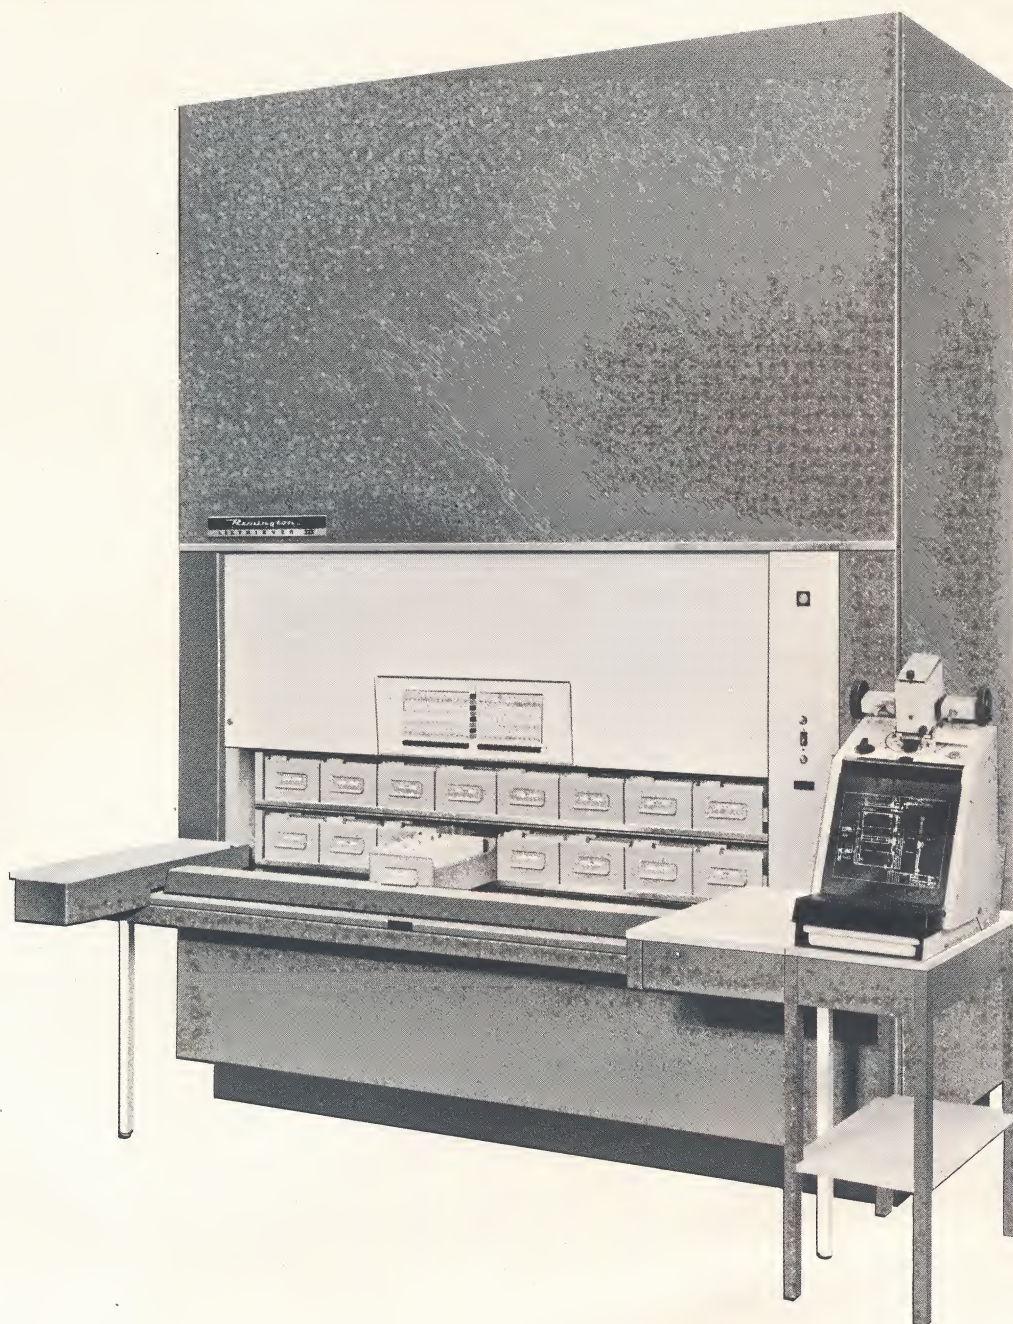

in *Hospitals*, for case histories, and all hospital records;

in *Retail Organizations*, for filming sales slips, accounting records and statements in cycle billing operations;

in *Schools*, for administrative records, for all forms of student records;

in *Insurance Companies*, for applications, claim files, premium records, cancelled checks and tab cards;

in *General Business*, for record retention programs, including sales reports, letters, designs, charts and financial reports.

This is a complete Records Retrieval station in which thousands, or millions of micro-filmed letter-sized records are efficiently housed in a Remington automated LEK-TRIEVERT™ unit. This practical Retrieval System provides push-button access to any single record in less than 10 seconds. A companion Remington Reader-Printer clearly projects the record for viewing on a screen—or reproduces a life-size hard-copy paper print in 30 seconds. The automated retrieval unit shown here is but one of more than a hundred different capacity variations for many different card sizes. This typical Retrieval System saves time, space and money.

The new Film-A-Record 444 compact camera is another improved product of Remington Office Systems. It has been introduced to provide you with the most economical means of microfilming your records with precision for your Retrieval System. You can look to Remington for new products, new control systems, and new effective retrieval techniques. Remember, only Remington offers such a diversified line of job-matched Records Retrieval products and services.

Up-date your own Records Retrieval System now by asking for a free comprehensive survey of your needs. Your local Remington Retrieval Specialist will do this for you without obligation. Call today.
